

### Panleuk & Calici Policies

#### **If a foster home has been exposed to Panleukopenia (PL)**

- It will be restricted to kittens or cats with active PL, those that are post-PL, or cats and kittens with more than two vaccines.
- The home must be completely PL free—no active or post PL animals—for six months or more before the foster can house any unvaccinated cats or kittens or any with less than two vaccines.

#### **If a foster home has been exposed to Calici**

- The same restriction applies except the foster cannot house any animals except those with calici.
- The foster home must then be completely calici-free—no active or exposed calici cats or kittens—for six months or more before housing any unvaccinated cats or kittens or any with less than two vaccines.
